This game is for 1-4 players – **each player needs a grid, and you need 2 dice.**

**To win:** you need to be the first person to cross out all the numbers on their grid.

On your turn, throw the 2 dice. You can then cross out the numbers you got – EITHER individually or their sum, or their product. If the number's in the grid more than once, cross them all out.

Example: Ajay throws 3 and 5. He could cross out: all 3s and 5s, OR all 8s, OR all 15s.
