

How to make your own **icosahedron** – a shape made of twenty triangles

1. Colour and decorate the shapes opposite
2. Cut out along the outside line – ask an adult if you need help
3. Fold all the inside lines away from you.
4. Can you see how the shape will look? Check using the example.
5. 'Roll up' your shape. Stick the tab marked A to the triangle edge marked A (but stick the tab underneath!)
6. Can you see how the other tabs stick? Feel free to ask for help.
