

6 Sided Dice Net

A dice is a cube. Here is a cube's net. The net is a flat shape which when folded and put together forms a 3D shape. If you don't have any dice at home, you could print this out and make one yourself! If you can't print, maybe try drawing one – remember the faces of a cube are squares, so every edge is the same length.

1. Cut out the net
2. Fold along all the lines, pulling the sides together.
3. Glue the bits that are not squares to the squares.
